

This is one of the most interesting uses of our mouldings and achieves the greatest continuity of design. The base cap AB023 mitres into the back of the casing AB110 and becomes the backband and again mitres into itself to become the chair rail. The chair rail is made using the AB023 and a modification of it. For close up details, refer to the opposite page. The crown shown here is the AB409 which is appropriate in scale and design.
